Torrey Udall talks about the Udall family legacy and POW

How does the Udall legacy influence your work at POW?

One idea that I wasn't privy to that is really baked into the ethos of POW's DNA is that I was observing through my family growing up that always identified as environmentalists that our sports, whether it be skiing, climbing or mountaineering, are inherently linked to environmental protection and working on the issue of climate. We have never seen those as two separate issues but always as one. And then to stumble into that in a professional capacity is an amazing thing and to work for an organization that links those two and holds them as one and the same is really inspiring.
